Recent critiques of COVID pandemic management and politics – a bibliography

We are now in the sixth year of the COVID-19 pandemic, with ever greater revisionism, apathy and complacency on the part of governments, health agencies, healthcare services, workplaces and the general public about the continuing risks. While many social researchers and public health researchers maintained a trenchant critique of poor pandemic policies and minimising tactics during the first two years of the pandemic, most have become very quiet since then. Government leaders can hardly bear to mention the 'C' word. Meanwhile millions of people around the world

continue to become infected/reinfected with the COVID virus and going on to develop disabling Long COVID, with less support than ever.

If you are hungry for continuing critiques of the continuing COVID-19 pandemic that acknowledge the political dimensions of events since the 'emergency phase' of 2020-21, see below for a recent bibliography of academic writing on this topic, all worth a read.

- Barrett, A. (2023). Covid-19 was the third leading cause of death in Australia last year. *British Medical Journal*, 381. <http://www.bmj.com/content/381/bmj.p842.abstract>

I've had a few queries about the stuff I've written on the social aspects of COVID - here it all is, collected on this website. Quite a lot of it is open access and therefore available to anyone to read/listen.
